

Vintage Computing

IBM Mass Storage System 3850 (80ties)

...meanwhile Willi is having a yellow honey snack.

dc7

Inventor: **Satan**

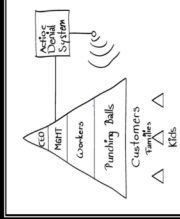

Year: ~????

Vintage computing would maybe help to find the network of people that did so much terror to the world

we should change that

Modern Slavery

...or why we should care about our Net-work infrastructure.

dc5

Inventor: **Satan**

Year: ~????

thlde could say everything

MRI/MRT

Inventor: ~???

To scan a human body, hopefully **siemens** does not have some sort of **stuxnet virus** here that filters implants and wires that were illegally implemented. Algorithm would be some interpolating algorithm that removes the implant and shows normal brain.

But unsure about that so far...

Robot Teaching Mode

Inventor: **xxxxx**

Year: ~????

If your Hand suddenly begins with small movements on the screen. (Écriture automatique, return channel mouse) they have already hacked your spinal cord implant (medulla spinalis) and they are testing if they can take over my telemetry. In my particular case they beat my hands against my own head (there are movies where autists do such things and there are special helmets for that). After they successfully attacked you they revictimize the scene (t10 card). And even if they haven't killed me, it would influence me. Maybe this is how they killed Tobias Moser, m46. And for the equal aged friends of the victim this would have the effect of psychological warfare (m44). if they used dt1 the real offender say it is all your fault, if not they say it's because you ate eg a cookie or drunk wine or other stupid reasons and b1,t1...

WOBLER SWEEP GENERATOR

t20

Inventor: **xxxxx**

Year: ~????

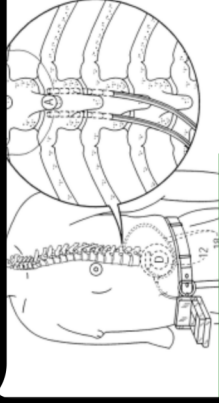

Generates a sweep and then the echo of this sweep is evaluated to evaluate the whole system. More modern devices are being used in eg. docsis networks.

If you project this principle on wires/antennas that have been placed below the skin and eg. a webcam as return channel you could maybe even portscan humans or hijack their telemetry

Today we expect that digital technologies are used, but the old things maybe still up and running

Spinal Cord Implant

RISK SCORE: 10

<https://0x8.ch/HackersCardgame5>

Inventor: **xxxxx**

Year: ~????

Originally an implant in the spinal cord (medulla spinalis) that could force an **>>> orgasm** <<< (they talk explicitly about "sexual things" to make the people focus on that (m107 Card) and to **obfuscate** that the **whole body can be remote controlled by such technology**), patented 40 years later 1999 under US6169924. Today Army researches in this field) Output; the victim can be "used" as a robot / soldier / killer or sex slave with a 3D model of the victim in a 3D environment (like games) if all people would have such thing they could create a weapon out of such technology and unfortunately kill billions in a few seconds. Hopefully those who created this system considered that vulnerability. Mobile phone could act as UpLink to a mainframe (the US Army maybe uses the Cry-Engine with PhysX for the "Simulation")

(Cyber-)Isolation Cell Padded Cell

Inventor: ~???

Year: ~???

Mental Institutions have Padded Cells or Isolation Cells where they put patients in. I was several times in such a Cell, the funny thing in Switzerland is, that the padded cell is not even padded. They say it's for people that would like to commit suicide, they even lock victims with straight jackets. It's about sensory deprivation, sensory deprivation is psychological violence or also some sort of behavioral "sciences". IMHO it would be better to put the people who victimized the victim into jail. They do the same thing with your contacts, there are several ways to isolate people from their social network and even from their family. I'm not quite sure, but I guess if they put you in a Isolation-Cell, the Network automatically isolates you for example also in your Social Network or the Internet. On the other hand empirical value can't be taught
