

Access Based Enumeration

Part 2

Access-based Enumeration

Access-based Enumeration is a technique that allows you to control access to files or folders that the user has no explicit permissions on. This can be achieved by creating a shared folder and setting specific permissions for different users. For example, if you have a folder named "Shared" and you want only the "Administrators" group to have full control over it, you would set the "Full Control" permission for the "Administrators" group and deny all other users. This way, even if a user has "Read & execute" permission on the folder, they will not be able to see its contents.

Inventor: ???

Dependence on the authorization (or the **clearance**) of a user, folders are shown or not shown in a Windows Network. If you would implement that on a client computer, you could do much more dirty tricks. For example if a **Pedophilia Victim**, a **Torture Victim** or a Victim that was Subject to **illegal Human Experiments** would find out who did that all to him they would maybe want to keep the victim silent. So they would **upload for example pedophilia Images on the computer of the victim**, call him a Terrorist for getting access to his computers, and would find the pedophilia content. If the Victim would look at the same Folder on his Computer, an Access Based Enumeration algorithm would hide this Images, so he would not know and the **Jury (m37 card)** would **Judge the Victim of Pedophilia when he was 10 years old, the would help to the illegal human experiments ...**

Year: ???

Access-based Enumeration was first introduced in Windows Server 2008 R2. It was later included in Windows 7 SP1 and Windows 8.1. The feature is still available in modern versions of Windows, such as Windows 10 and Windows 11.

Technique: **Access-based Enumeration**

Tools: **Windows File Explorer**, **PowerShell**, **Group Policy Management Editor**

If a NSA/CIA would have access to all peoples data, even the private diaries they would maybe install some AI that analyzes what the whitehat hacker just says, writes or thinks. Then they would try to match that on persons in his/her network that would get a cognitive dissonace because of that sentence or concept knowledge even when i dont write names in my diary. CIA would possibly know what person or eg. Meyer-Briggs archetypes would rage because of what i just written into my privat diary. So it would be possible that the CIA/NSA would intentionally send this private diary entries to people to "motivate" them to attack me.

SYSTEM-THEORIE

<https://0x8.ch/HackersCardame6>

Inventor: **Niklas Luhmann** **Year:** ~1914

A **System** is made out of **Elements** [E] or several Subsystems (= abstracted an Element too). The Elements have relations (**Relations** [R]) and the relations have (German: **Conditionierende** [K]) that describes how the Relations have to be. The Law or the Bible or the Koran(?) or Karl Marx "Das Kapital" could be such a "Conditionierende". This helps to understand the big picture, Social, Mechanical-, Biological-, Computer-Systems or Software.

For example if you have Quantuminserts, Tarmoil Turbine you could also filter or inject words that would make the victim look or drive insane.

Inventor: Isaac Asimov?

Artificial Intelligence, but also Propositional calculus or German Prädikatenlogik (= eq. PROLOG) or learning algorithms, the so called singularity is maybe already here, which would explain why I wept when in the end of the Movie "Artificial Intelligence" finally sees his "Mother" again. But this should not be his mother, but his equal aged mental mother that showed him the women side of the world so many years ago. Companies are Artificial Intelligences too, but mostly from the dark side of the force. If you want to learn it maybe begin with **mini-max algorithm** and **Tic-Tac-Toe**

Year: ~1960

Control your **touring complete** Avatar and say something if he/she suggests wrong things like violence, murderer, amok...

Access Based Enumeration

Customize

Access-based Enumeration makes visible only those files or folders that the user has the rights to access. When Access-based Enumeration is enabled, Windows will not display files or folders that the user does not have rights to access.

Year: ???

Depending on the authorization (or the security clearance) of a user, folders are shown or not shown in a Windows Network. The same principle maybe applies to websites, youtube, maybe even github... if you look at the m50 card the same system "could" be used to **split society into two+ separate groups**, and there would be even some triggers known to some of the older groups to start a civil war between this two groups. Maybe to explain **Access Based Enumeration++** to the society would **deescalate** this problem a bit. So update your people with this knowledge. I learned about Access Based Enumeration at ABB Technikerschule Baden, hopefully the teach this function not for the dark-side... if done in the graphics card or graphics driver one could manipulate things even if he checked if the file was transmitted correctly, so one need to print all evidence.
