

EventTrigger

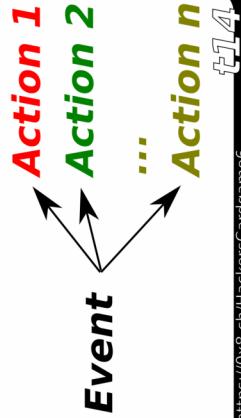

Loop Recorder Part 3

Infrared Ray Weapons maybe in every Display

Antenna (Wasserflue)

-???

Inventor: ????????

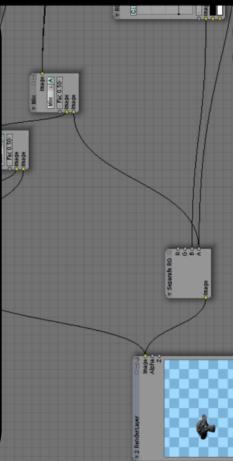

Specific Events can trigger Actions. GPS Data, Data from acceleration sensors in handles (for example specific roller coaster) Events could be Sounds, turning on Light Switch (maybe evaluated by smartmeter and the a list of what device uses how many watts, images, Automatic Behavior Recognition, websites (urls), Buttons or Mouse gestures on a computer, Handy or even if you draw a circle with your hand in the air. One can recognize events with AI (Pattern Recognition, Deep Learning,...) For Example if Jürg S. would have fired illegally with a weapon, this event would have been recorded and caused an event in a Gunfire locator system [1]. Concerning Urs B. (statement not verified yet) are the 1960s those who programmed the triggers against marc jr landolt, after they programmed those triggers they run in auto-pilot mode and they cant delete it (auto-pilot = an allegation)

Like t10 or t23 a game engine (here Blender 3D) is also some sort of t7 Card, but it's not just a loop it are more event-triggers (t14) or state machines (coil), for example if I leak about this sort of things a16 card is being activated against me. They often use an event in real live to create this story, you would focus on the initial scene and the person instead of technology. And possibly with AI / Deep Learning (a11 card) prerendered AI or genetic algorithm that learns. The card is in neutral gray, because you could use such technology also for good things but in my case they abused it more like weapon or "white" torture against me, that wants to kill. Book Erebovs. The algorithm would maybe also try to isolate whistleblowers and whitehats that could be as simple like an inverted F=TV5r Card (Alex Wissner Gross) formula, not keeping all people connected but isolate some or even all.

In my opinion this terror attack against me uses the m123 card acid in my body lotion -> seal the closet - infrared laser - maybe in aacer display, add polarization filter - active denial system(s) that roast first layer of my skin - maybe in combination with chemicals on my skin or - or chemicals that was put into my body lotion, or - or even both (even 3 factors) -> no solution yet obfuscates with chemitrodes that stitches that seems to be placed in the skin / face too

As seen in Battle Filed Bad Company 2, the m-com station is shown as small box, but it would be more likely that these are big antennas like the one on the "Wasserflue" (in Küttigen near Aarau) Maybe one should find out the power the antenna uses and how strong the "drum-antennas" are and if it would be enough power to activate implants (maybe just a golden wire with lambda/in (other Antenna card) to drive people insane or even drive tobias moser to commit suicide with his military weapon (as far as we heard))

NOT YET PROVEN

Over electrodes on the floor he could give the mouse electroshocks = punishment / create aversion By pressing the Button the mouse was rewarded with a biscuit = reward / incentives / reward ☺ a2 card Skinner searched for sequences of incentives and punishment, to completely remotely-control test="object" caused long-term damage, if you are being subjected to such experiments talk about the details with equal aged people you trust. If you tell eg the Police they just diagnose you eg Schizophrenic and would put you in a mental institution where historically a lot of such illegal human experiments were made, eg. Burghölzli, guess today (2019) the abuse refugees. #VerdingKinder, #SchwabenKinder, not loved Childrend (often the oldest male), Soldiers, ... generally people nobody cares about, we as a society should act and speak what we know about.

If Jurisdictions use 3D Models for Surveillance or accused people one should check the device and the supplier. If NSA/CIA uses Scapegoats for things they have done they would suggest local jurisdictions to do this sort of surveillance, but the device and infrastructure would be owned by the CIA/NSA to make the local jurisdiction believe that the Scapegoat is really the criminal. First problem would be that the real criminal is still free and planning maybe already the next Crime and secondly the Scapegoat would then driven to commit Suicide and the Jurisdiction could only say: "It is fair that the Criminal died" but they would know that m37 -> dt1 Card.

Since 1950s are things like Stimoceiver (t11 card), so there must be a device that transmits and receives the signal something like Neuralink (Elon Musk's Company). If the keys of an persons Neuralink would have been hacked or leaked, the person with the key and the strongest M-Com-Station could force the person do things, he otherwise would not do (wrist case a11 card) if the implant has even the ability to dissociate that person so that the person does not remember anything (you could call that Hypnosis) it would be stupid to sentence only the "bot". Even if the "Bot" confessed that he has done the crime, case is not yet over. The person who owns the strongest M-Com-Station would still be free and maybe planning the next murder, rape, amok... But in the real world, it would maybe look more than t26 card, trx [BFBC2 Honeypot](#)

The Active Denial System roasts the top layer of the skin at a distance of 500m. For a range of 5 m logically more than 100 x smaller, small enough to fit in a cell phone. Actually, 1930s electron tube technology, but today you can do this also with semiconductors (Esaki-Tunnel Diode). Maybe one could do the same thing directly in the CPU with Army-Grade Crypto, since the radiation power reduces to the square of the distance, it would be quite small. The "Active Denial System"-denial would thus be the natural arch nemesis of a TinFoil-hat. At a range of 500m one could terrorize lodger and if it would have been coupled with the victims computer and there are additional some algorithms, one could drive the the victim insane, drive to commit suicide or make it even run amok. See cars: t1, t10, t11, a16, at1, b1, e1, e5, m13, m19, m32, m46
