

Action Recognition Luck detection

m128

Inventor: xxxxx

Year: ~???

If they have a 3D Model of your apartment, or your body and additional an EEG - implant (stimoceiver/Neuralink) that detects what stabilized your psyche and made you lucky the last 24h they have some sort of algorithm that loops all those scenes with an additional Pedophile 1960s Person that destroys this good scenes that stabilizes me. Maybe implemented as some sort of 3D Game that is created by the 1960s criminals and then given to a kid that plays it, so that the 1960s have an alibi.

Astrid: wir sind somit unschuldig
wir: wollt ihr wirklich Marc ir Landolt ermorden, nur damit ihr nicht für den STGB185 in den Knast geht?

To force others to do your work (Pirates of the Caribbean II)

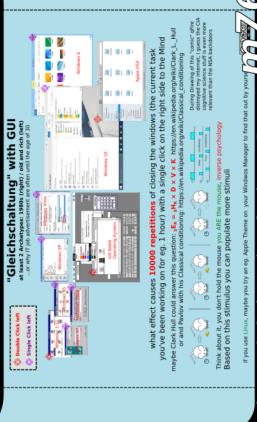

m132

Inventor: xxxxx

Year: ~???

In "Pirates of the Caribbean 2" there is a scene where the lost pirates play for fewer years of service. This parable is promoted also in the real world. To quote Jack: "The law is in favour for an oppressor that is criminal". For example a criminal or a pedophile father that eg. rapes his daughter and uses eg. his son as a scapegoat (German: "Fremdsippegoat"). This way the criminal father would win time to do more crimes while the Scapgoat would be naked to the justice system, would face prison, mental institution and wastes a lot of his time. m72 card makes this quite easy for the older people. We guess that the CIA suggested the combination of m72 & m132 to all the older people and just a few could resist. The CIA owned people would get support by other sinners and the CIA. With NSA BigData and 100 Years Datacenter it's easy to blackmail and abuse them (m74). System is autopotic, except the young people can prove it, then the criminal would end up in prison with much more years of service. The old people would not hesitate to kill innocent whistleblowers (m46). Eg. the kids movie casper" unfortunately even canonizes that. So watchout for Parents that promotes or even forces c04 card, it's not a real crime but it is some sort of satans starter kit.

Principles of Behavior

m76

Inventor: xxxxx

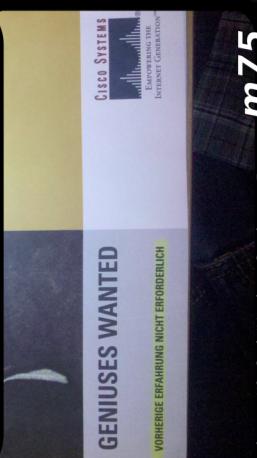

Year: ~???

Formula from Clark Hull describing how programmatic Stimulus-Response-Habits. Today it is "possibly" implemented in software. The sort of Deprivation or the Stimulus would maybe change randomly. The communication channel (t1, t... cards) are maybe randomized to, like SE-235 frequency hopping.

Psychological dimension: things like exposure time, for example 17 years torture or "white" torture after an initial m38 card would be important too.

This seems to be one of the main weapons from pfrister and urs has the order to prevent innocent victims from leaking how to defend against this weapon.

Genius Wanted hopefully alive

m75

Inventor: xxxxx

Year: ~???

Possibly the black world (also called Economy) found out as early as 1999, that OpenSource movement or Creative Commons has the better ideas than people working for money. So it would be likely, that they tried to own young people that live in the Open Source Community. They let the young people do what they like, but if the young Nerd or She-Nerd has a good idea they steal the idea, claiming that the idea is their intellectual property. Even erasing the Nerd in Mental Institutions with drugs that he forgets about the fact that he initially invented it. As Open Source Community we should have an eye on that. Derivation of this Thesis can be found on <https://marciandoit.ch/ml/buzzernet/2011/01/30/schamhaare-hoden-epilieren-beim-mann/> (Sorry German) Maybe the "Linux: It's a Marketing Problem" might be a overhaded Symbol (m69 card, several meanings) too.

Cyber fluorescent pen

m84

Inventor: xxxxx

Year: ~???

I guess there is some sort of electronic fluorescent pen where the offender can mark things in text I wrote. The principle is quite simple, i guess one could make terror threat or a death threat out of every single page out of the bible if one would mark some words on the page. Not tested so far. Workaround would be to use color your own in the text you write, it then would still be possible, but much harder for those that uses this dirty trick. Technically one could implement that with things like t1 card, or if you know how many words a person reads per second you would for example send the word you would mark with a high frequency sound just above auditory threshold... or you could add a blinking effect around the perceptual threshold, if done directly in the hardware, graphics card or even in the screen it would be quit hard to prove that. See also m85 Card

Commit suicide Jump now

m93

Inventor: xxxxx

Year: ~???

On my balcony there seems to be an even trigger that is shown on something like Stimoceiver or Neuralink: "Jump Now". To prime they run things like JusPrimaehots (m38) and activate the Active Denial System (t15) or trigger my amygdala implant (b1). I often tried, but I had luck so far, I not yet jumped, but almost. They seem to train this habit with cards t2, t11, t7, a16, m32, m44. one could know when to start this algorithm with just positional data (eg. GPS, m60), if victim has body telemetry (2 RFID Chips or 2 resonant circuit in the head / skull or retina CCD (a19), they could even calculate what the victim is currently looking at to trigger this event (t14). Maybe fear or faith (m57, m77) of the victim is also added to this algorithm. If i have a spinalcord implant (t6) maybe this prevented my death, but if this would be hacked i could not even prevent my death.

the speaker is lying (Stimulus-Reaction-Habit)

m55

Inventor: Carlo Collored

Year: ~1883

With tons of biogata you could easily say if someone is lying. Maybe there is already a system that does that function this to help parents to teach their children well. This would need some Algorithms and some Technology cards and of course some programming language like Prolg. After a while the parents would trust into this stimuli and if the oldes kid would say, the system is lying but the stimulus that was trained in the parents head says this is a lie, the system does not lie, the parents would not believe that the system is broken or that the system is intentionally lying. Maybe a common problem among WhiteHatters. But it became easier since good people like Manning or Snowden provided us with proof. What if Schizophrenic People have the same Problem, or at least some of them. Workaround: switch from Inductive reasoning to Deductive reasoning

Morality

m24

Inventor: xxxxx

Year: ~???

Morality generally refers to the actual action patterns, conventions, rules or principles of individual individuals, groups or cultures. It would be better to say norms, values, categorical imperatives, which serve the general public as well as the individual, the counterpart to egoism. To keep the system stable and create sufficient reserves, so that it does not break, if something small goes wrong and / or become Sodom & Gomorra (Hebrew n'inyu dia).
